

Practicing EA

- Architecture Governance and Coherency Management

Copenhagen, 25-27 March 2009

Workshop facilitated by John Gøtze and Allan Bo Rasmussen

Enterprise Architecture covers all dimensions of an enterprise, and is therefore uniquely able to serve as the 'meta' approach for analyzing, designing and changing enterprises to operate successfully in a coherent way and survive in highly dynamic environments.

That characteristic is indeed *the* advantage of EA, but also it's biggest challenge. Because how do you do it in practice?

During this workshop, which is organized in cooperation with the Danish IT Society, participants will learn about managing and governing the architecture of the enterprise through a series of case stories and guest interventions.

Themes for the workshop include:

- Architecture governance arrangements and mechanisms - structures, processes and communications
- EA practitioners - from ivory towers to communities of practice
- Design Models of EA - value proposition and emphasis
- Modes of EA - foundation architecture, extended architecture, and embedded architecture
- Reference models, frameworks, and best practices - relations to CobiT, CMMI, and strategic planning
- Coherency Management - introducing the Generic Coherency Management Framework (GCoMF)
- EA and the Coherency Management Assessment Framework (CoMAF) - Mapping of assessment key focus areas, architecture goals and outcomes.

Times: 25th from 4PM-10PM, 26th from 10AM-5PM, 27th from 9AM-3PM.

Location: Radisson SAS Royal, Hammerichsgade 1, 1611 Copenhagen

Cost: Full package including workshop, dinner and hotel room - €2500 + 25% VAT.

Contact and registration: John Gøtze, john@eafellows.com, +45 5124 5878
